The Moone is the lowest planete. And is
cold and moyst lyck the watter. and hath
an interest in flumatyck parsons. and she
is a feminine planete and is mother and
a ministrix to all moyster and is lady and
gubernatrix ouer the seas and watters
and her howse is in Cancer and she doth
fetch her cercuite ons in a mounth. And
she doth induce mutabilite. inconstance.

¶ The. viii. Cappytle doth shewe of the .v. Aspectes of the planetes.

As I sayde in the. vi. cappytle ther be. v Aspectes of the planetes. A conuuction. A sextile, a trine A qurtile and an oppolicyon. A coniunctione pperly is not takyn for an Aspect. for an Aspect is a dystance of signes. But planetes coniunct. doth not differe by distance of degrees. for a conuuctiō a monges ỹ planetes is when the planetes doth drawe to gyder by lesser dystance than. xii. degrees. & that one of them sallith vnder the bryghtnes of an other. than it is nampd coniunct to the sonne. And when the planete doth drawe nygh to ỹ sone by. xv. degres than is ỹ planete combustid by ỹ splender or bremes of the sone. And than dyuerse times happynith rayne as it doth. When the sone and the Moone be almost to gyder in ther orbs or cercles. than in the end of that moone sholde be rayne This aspect

Which

Which is a conjunction And sixt in order is nampd a benivolēt or a frendful aspect for good to goodnes is increspd of a gret and hygh benivolence and vertu. And yf goodnes be Joyned to evil. thā ỹ evilnes takyth a way halfe the goodnes. Wherfor he that wyl go about to do any good thig owt to mark the mone specyally yf she be conjunct to good planetes or els seperatid from evyll planetes And he that wyl go. about an evil or a shrod turne must chose the tyme whan the moone is conjunct w̄ evyl planetes. or els seperatid from good planetes.

¶ The second aspect is a sextyle. that is whan the planetes be dystant one from another by. vi. partes of the zodiack. as thus in makynge a similitud of. vi. planetes. that venus be put in the begynnyng of Aries. and another planet in ỹ begynnyng of Gemini Or els one in the mydle of Aries and another in the the mydle of Gemini and so in leke maner of all other planetes

planetes .but this .Aspect is not pkyt in frendshep for the aspect is not certin nor oppn but pryne

¶ The therd Aspect is a quartyll. And ꝑ is whan a planete hath an . Aspect to an other planete. by dystaunce of .iii. sygnes the which dystance is the .iiii. part of the zodyack. as thus pkone planete be in the begynnynge of. Aries and another in the beginning of Cancer. Or els one planete in the mydle or end of Aries. and another in ꝑ mydle or end of Cancer. Such aspect is inplit of hatred & enuy and traytery.

¶ The .iiii. Aspect is a tryne. And that is whan one planete is dystant frome an other by .iiii. sygnes. the which distance is the therd part of the zodiack as thus, pkone planete. Mare in the begynnyng of Aries. and the other in the begynnyng of Leo this is a manifest and a perkit aspect of frendshep

The .v. Aspect is an Oppolicion & that is whan one planete is distant from an other by halfe of ꝑ whole zodiack as thus

that

that one planete be in the begynnynge o
in the midle or end of Aries and the other
be in ỹ begynnyng mydle or end of Libra
takyng both lyek and so is hit in al other
signes This aspect is an euident & mani
fest aspect of hatrede of warre and other
displesures

¶ The.ix capitle doth shew, of ỹ mutacio
of the yer whan any rayne. wynd thon
der hayle frost or snow shall fall.

Who so euer ꝑ wyll ꝓnostycat of the mutacion of the ayer he must fyrst marke the iiii. tymes of the yere. Whiche be to sai ver estas Autūnus & hiems that is to say. the spring ꝑ somer harupst. and wynter. Ver which is the spryng by nature shold be hote and moyst And in this tyme blod doth moue and in cresyth with all other naturall thynges, Estas whiche is somer is hote and dry & than coler doth moue & increasith. Autūnus or harupst is cold and dry & hath respect to melancoly, hyems which is wynter is cold & moyst & hathe respect to flume. Secundaryly. one must marke the nature and the qualytes of the sygnes, which be moyst which be colde And which be drye Therdly one must consider the nature or ꝓpertes of the planetes. for the howse of conseacyon is Jubyter. The howse of tempestes is Mars, & yf they be coniūct or be in a quartyle aspect both will happē Yf. saturne & venus be coniunct, or be in a sextyle

a lerpte than hit wyll be cold, Jubyter in the lone. or in an oppolytine alpect wyll haue grett wynd Marcury with venus caulyth raine ¶ Forder moze a conũcty on of laturne with the mone. maki h mu tacyon in the Ayer fo; rayne & grole clou des be clenatyd with cold. lpecially whã this coniunctyon is in any aquatycall o; tereestyall lygne. ¶ A coniunctyõ of Ju byter with the moone caulyth dyuerce & many whyt cloudes. ¶ A coiunctyon of Mars with the moone in moyst lygnes caluth rayne ¶ A coniunctyon of the lon with the mone. caulyth rayne lpecyally in moist lignes. ¶ A coniunctiõ of Venus w the mone in moistlignes caulith lwet dwes and loft rayne ¶ A coniunctnon of the moone to Marcury in moyst lygnes caulyth rayne w wynd. ¶ A coniunction of laturne with Jubiter. iii. daies befoze o;. iii. dayes after caulyth gret mutacyõ in the Ayer. ¶ A coniunctyon of laturne with mars in moyst lygnes. iii dayes be foze and after the Ayer to be co;uptyd by

the Which

the Which many men Women & chyldryn be infectyd With dyuerce diseses specially With the pestylence. And dyuerce tymes causyth hayle rayne lyghtynyng & thondryng. this coniunctyon for mā or Womā is moyst Wayst ¶ A coniunctiō of saturne With the sone. causith cold rainy Wedder ¶ A coniunction of saturne With. Venus coniunct in eny aquatycal signe makyth cold raynes to indure ¶ A coniunction of saturne w̄ Marcury in aquatycal signes causyth rayne And in dryesygnes causyth. dryues, ¶ A coniunctyon of Mars w̄ marcury. in hote sygne causyth. Hete in dry sygnes. in aquatycall sygnes rayne.

¶ Whan there is no aspect nyght to the
mone or far from an euell conjunction ỹ
day is good for all maner of things

¶ The mone conjunct in the dragons hed
is veri good And conjunct With the taile
of ỹ dragon is euell

¶ The mone Junct Wt good steres is good
And Junct Wt euell steres is euell

The .xi. capitle deth shew of flenbo-thomi or letting of blod

Who so euer Will chose a day
to be let blod in first he must
chose a fire lygne Which is
hote and dry. as ares Sage
tari And leo And although
leo is a fire signe and is the howse of the
sone and the sone in nature is contrari to
the nature of the moone for ỹ sone is hote

and dyeth the moone is colde and therfor ꝑ
howse of the sone Whiche is. Leo in hym
is no good lettyng of blod. Secundarily
he must choose an Averysh sygne which
is hote and most As the fyrst medieate of
Libza. And the Wole sygne of Aquary. and
although ꝑ Gemini and ꝑ second mediate
of Libra be Averysh. yet the Galax hath
his course that Way in ꝑ Which be many
sterres of the nature of Wars. Wherfor ꝑ
moone beyng in that place is combustid
And therfore in that sygnes at that tyme
is not good to let blod Therdi Waterish
sygnes Which be moyste and cold be good
to let blod As Cancer & pisces, And Scor
pio although of nature he be Waterysh
yet not with stonding he is an oppositine
sygne of the exaltacyon of the Moone for
Taurus is the exaltacyon of the moone &
Scorpio is oppositine in descendyng of ꝑ
moone Also Scorpio is the howse of mars
Wherfor exhaustyng of blod in this thig
is not good Also ꝑ coniunctyon of ꝑ mone
Wꝑ the sone. iii dayes before and. iii. dayes

after is not good letting of blod. Nor ye con
iunctyon of the mone with saturne. Nor ye
coniunctyon of the mone with mars and
13. degres before an as many after. Nor
the oppsicyon of the mone with the sone.
Nor the opplycon of ye mone with Mars
is not good to exhaust blod. Also a quatile
aspect of the mone to the sone. And a quar
tile aspect of the moone to saturne. And a
quartile aspect of the moone to Mars. all
thes aspectes be not good to minishe blod
for the Moone beyng in thes Planetes &
Aspectes is contrary to the nature of mã
consyryng fleobotomy
¶ A tryne aspect and a sextyle aspect is
good to let blod so be hit the moone be in a
good sygne ¶ Also the moone coniunct wt
Jubyter in a good sygne is best letynge
of blod ¶ The moone coniunct to venus
or Mercury although they be good cõiũct
ons yet for as muche as the mone is wer
nyght the coniunctyon. of the sone hit is
not good to let blod ¶ Also ye mone beyng
in a good sygne hauyng a sextyle or a tryne

ne aspect to Jupiter or Venus. or Saturn
is best to let blod for thes aspectes be good
¶ Also the mone coniunct with the heed
or tayle of the dragon beyng with in .xii.
degrs before or after is not good to exhaust
blod. ¶ Forder more no Wayne nor mem
ber of man oWoghe to be tochyd or hurt wt
any instermnent or Ferne Whan the mon
is in any sygne that hath domynyon of ꝑ
member .Wherfor in all maner of exhaus
styng of blod from man or Woman ꝑ day
and the tyme must be electyd & poyntyd
by som doctor of phisick or Astronamer.
What payne ,shold be oppynyd for and yt
aman do lett blod of a payne namyd ceps
halica Which is a payne for the hed & the
signe be in Aries.here ꝑ Sebothome doth
gret harme thoroW his ignorance & thus
in lyek maner he may offend in letyng
blod in any other place of man. ¶ Forder
more ꝑ.xiii. kyne sygnes be good for stemy
tyck parsones for ꝑ sygnes be of nature
contrary to the cõplexione therfore Con
traria cõtrariis curãte. So in liek maner
Fierish signes is good for melancoly mẽ

And watery ly̆kly̆s of good ly̆f con-
ryck men And I say now a dayes
to vse lettyng of blod except for
the squynce ỹ pestylence or for
the kyndes of lepery. is not
good. for no mā can exhaust
cupll blod but he must tak
good blod with all. And
ỹ leyk of man is in ỹ
blod for ỹ spyryt
of man is in ỹ
blod. And
ther be
other
wayes to clense or to puryfy the
blod wout ye bothomy or
lettyng of blod

¶ The. xii. Capitle doth shew. how
whā & what tyme a phisicyō
shold mynyster medycynes

Ypocrates saieth ꝑ phisicion is a blynde phisicion ꝑ knoweth not Astrōamie for Astronamy doth shew how whē and what tyme al maner of medsons ought to be ministred wherfor I do say ꝑ an expulcyue medcyne be taken interpally. And the moone beyng in. Ariete. Tauro. or. Capzicorne whiche taketh theyr name of terrestyall beestes named. The Ramme the Bull and the Goote which hath doble belys. one is motiue cause the whyng theyr cud ꝑ other is digestiue mouyng by reson of the influence of the celestyal sygnes of iyck ꝓperte. shal cause the syck parson other to vompte or els shall cause nauseons or eructuatiō. or cause the substance that is in the stomacke to ascend to the orifice of the stomacō and this doth lett ꝑ operacione of suche medicynes specyally ꝑ Saturne by a quartil Coniuntion or an oppolicyon dothe geue theyr fortytudes to ꝑ sayd sygnes. Wherfor let phisicyons be circumspect in thes

mater

matteres and in all other. for hipocrates
sayth in his fyrst pronosticates . There be
certyn celestyall thyng in the whiche the
philicyon must prudent and he must be of
great prudence .&c. Wherfor Auicē saith
of celestyal & terrestyal matters happyneth
.&c. Wherfor hit is to conclud that euery
philicyon shold know ỹ nature & complexiō
of ỹ sygnes and ỹ planetes. w ỹ aspectes
of them and to haue in a memory the cre
tyck dayes. And not to forgett ỹ operaciō
of the sygnes which be attractyne. reten
tyne dygestyne and expulcyne ¶ Wher
fore I do say that the vertu of attraction
consistith in hete and dryness And he that
wyll conforte and help ỹ vertu of actraciō
must do hit when the moone is in a hote
sygne as in Sagittary ad Leo. ¶ To cō
forte or to helpe the vertu of retencyon. is
when the mone is in a cold signe & dry as
in tauro and virgo ¶ The cucur & helpe
the vertu of dygestyon is when the mon
is in a hote signe & a moist. as in Gemini
Libra and Aquary. ¶ To helpe expulcy
ues

ues is Whan the moone is in a cold and a moyst lygne as Cancer Scozpio and pisces. ¶ Whan Uenus regnyth in a good aspect to purge Coler. Whā the sone doth regne in a good aspect, purge flem me Whā Jubyter doth regne in a good aspe. ct, purge Melan coly, ¶ Whā ther is a cō iunctyon oz a quartyle aspect of saturne With the mone minister thā no medycyne uoz Whā Mars is in a cons iunctyon. ⁊c.

¶ The.xiii.capytle doth shewe of
sowyng of sedes.of settyng
of herbes.and
plantyng
and
Grefftyng of
trees.

The moone beynge in Tauro is good to sow sedes to set herbes to plant and graff trees takīg the tyme of the yere. beyng in a sextile or a tryne aspect

¶ The mone beyng in Cancer is good to sow sedes although it be a movable signe And so hit is in virgo hauynge a sertile or a tryne aspect ẅ to Saturne & ptholomy sayth in the fyrst of his quadripartites hit is good to plante

¶ The mone beyng in libra hauīga good Aspect is good to delue & dygg & to gooe to plow and to ere and to sow And so is ỹ moone whan she is in capricorne

¶ The mone being in libra is good to set herbes & to plant trees hauēg good aspect

¶ Herein is to be notid that all thes thīngs is not good to goo about if Saturne or Mars haue ani euell aspects

Now

¶ Now to conclud I desier euere mā to
tak this lytil Wark for a past time. for I
dyd Wrett & make this bok. in. iiii dayes
and Wretten With one old pene With out
mendyng and Wher I do Wrett ỹ sygnes
in Aries in. Taurous & in Leo is for my
purpose it stondyth best for our maternal
tonge
